Dear Wil:

25X1A

I have reviewed the attached correspondence initiated by [REDACTED]. We are both firmly convinced that you should have both a sensitometer and a densitometer for proper quality control of processing.

25X1A

If the sensitometer you are using is similar to the one I saw at the [REDACTED] about two years ago it isn't good enough.

25X1A

Sometime ago we prepared a recommended list of equipment and supplies for the [REDACTED] machine and included it in our manuals. Mike refers to this in the first paragraph of his request. I am attaching an additional copy of these lists to this letter. We have listed Kodak items where they are available because we are most familiar with them. Others might do as well. I suspect your detachments have many of the items already and perhaps different quantities of supplies might be more satisfactory.

25X1A

The last quotations I had for the Sensitometer and Densitometer were \$506.25 and \$67.50 each respectively. These are normal stock items but occasionally require 60 day delivery. The other items are relatively inexpensive so I will not quote on them until you indicate what you want.

25X1A

As requested by [REDACTED] I am sending a copy of this letter to [REDACTED]
